DUB-1 NOISE

SAVE: a crackle groove rung on the chord, and the air under it, as of 1.4.0 (build eceec65). FM-1 firmware.

Noise 1/3: its groove's lane, bar 1 above bar 2; VINYL at the right.

Noise voice 2/3: Air, Tone, Decay, Width.

Noise LFO 3/3: on the Filter, 20 kHz at the top.

THE GROOVE: TWO BARS, DENSITY 50

Eight hits spread evenly, turned, two a step off, a ghost lower.

EACH HIT RINGS THE CHORD

1 · WHAT IT IS

Not a bed of hiss: a voice, played like the drums. It plays only while the music does, fading in and out over half a second.

THE GROOVE	Hits on a two-bar pattern of semicorcheas (16ths), spread evenly, turned, two nudged a step off, now and then a quiet ghost. Break and Thin phrases: fewer.
RUNG	Each hit a short burst that strikes three resonators on the chord's root, third and fifth, low (E1 to Eb2), retuned at each hit; then a band-pass takes the top off.
THE AIR	A quiet hiss under it, and now and then a dry vinyl click.
THE DUCK	It dips on every beat, deeper than the music, and swells between.
SENDS	Into the plate, a little into the echo; more while a stab is thrown.

2 · THE NOISE PAGE SAVE · its part

DENSITY KNOB 1	How many hits ring in the two bars; heard from the next bar. At 0 the clicks go too (the hiss stays: Air). `0 none · 50 eight · 100 sixteen`
VARY KNOB 2	How often the groove is drawn anew at a phrase's start, rather than kept (a motif that comes back). Centred; far left **Hold**: always kept. `Hold · 0 as Form's · +50`
KNOB 3 · 4	Empty. Its sends: the noise's strip (6).

3 · THE CHARACTERS ALGORITHM, Noise · Noise voice

The same machine set otherwise; its name at the rule's right. Each piece keeps its own.

VINYL	The crackle groove rung on the chord.
TAPE	The hiss through the resonators too: a pad swelling between the beats; fewer hits, longer, darker.
DUST	Dry clicks and bursts, no ringing; more of them, brighter.
ROOM	On the key's tonic triad, not the chord: long, more air.
MACHINE	Inharmonic (1 : 1.41 : 2.76): metallic.

4 · THE NOISE VOICE PAGE SAVE again

AIR KNOB 1	The hiss under it, softer or more. `0 none – 100 the loudest`
TONE KNOB 2	The band-pass: the rings darker or brighter; the arrangement's sweep moves it too. `-50 ~250 Hz · 0 the piece's · +50 ~2 kHz`
DECAY KNOB 3	How long each hit rings on the chord: a knock to a hum. Longer in a Break. `0 ~70 ms – 100 ~1.2 s`
WIDTH KNOB 4	The rings mono to wide: the third further left, the fifth further right. `0 mono · 50 the pieces' · 100 wide`

5 · THE NOISE LFO PAGE SAVE a third time

As the chord's (sheet 4): a wave on the bars and a wander, how far Form's Drift says.

DRIFT KNOB 1	More or less of Form's Drift; far left **Still**. `Still · 0 as Drift · +50 twice`
WAVE KNOB 2	The share, wander to wave. `0 the wander · 50 half each · 100 the wave`
RATE KNOB 3	How long the wave. `1 bar · 2 · 4 · 8 · 16 · 32 bars`
TARGET KNOB 4	Also ALGORITHM here. **Filter**: a low-pass on all of it, open at the top of its reach, closing as far as ~1.4 kHz. **Tone**, **Air**: their knobs (the Noise voice page's) moving, a quarter of the sweep at Form's Drift 100. `Filter · Tone · Air`

6 · LEVEL, STRIP, SAVE HELD

OCT- / OCT+	On a Noise page: its level, 5 a press; both together, muted or back (its level kept).
THE STRIP	SEL, white 6 (D4) held: Level, Echo, Plate, and a Filter: its high-pass on the rings and the clicks, its low-pass on all of it, the hiss too (sheet 2). No black key: no solo, no throw.
SAVE HELD	0.5 s, a **nudge**: Tone, Density, Decay, Air a step. 1.5 s, a **shake**: another character, every value a big step. (Saving is GLO.)

7 · AROUND IT

WET SEL KNOB 3	Moves the noise too: its dry down and its plate and echo up, or the other way.
BY ITSELF	Its air, tone, clicks and decay drift a little, on the barlines, each piece at its own pace.
LOCK SEL held	Each phrase keeps its groove; a Density turned waits until Lock is off.
THE PIECES	Each its own character, Density, Air and Tone; Basic: Vinyl, Density 56, Air 66.

SAVE, AGAIN AND AGAIN

Noise › Noise voice › Noise LFO › Noise; SAVE blinks past the first.

THE SCREEN

On the Noise and Noise voice pages, the noise alone: grey specks, a hit each (or its scope, its spectrum); its groove's lane. The clicks come at random: not in the lane.
